

## “Final Year Computer Science & Engineering Students of Waljat College Visited Nuha’s Oman”

Students of final year of Bachelor of Engineering in Computer Science visited Nuha’s Oman L.L.C. on 4th October 2017, accompanied by faculty member Mrs. Vallikannu. Located in the midst of Rusayl industrial zone, the company manufactures a wide variety of cables based on the needs of the customer, while ensuring certified quality of the finished product.

The visit commenced with a brief introduction of the safety measures taken by the employees of the company by Health, Safety and Environment resource person. All visitors have to abide by the same. The students were then divided into two groups, which were led by resource persons Mr. Amol Kashikar and Mr. Muadh Nawaba, and taken to the manufacturing site where the complete process of producing the cables was demonstrated.

The students got a good understanding of the steps involved in production of copper cables and the work environment of a manufacturing site. They also learnt the various types of cables that are produced in Oman. The students were able to appreciate the efforts that go into making something that is usually taken for granted.

The industrial visit to Nuha’s Oman. was a great experience for the students as well as the accompanying faculty. It facilitated learning and understanding of a new domain for the students and also made them aware of the workings in a real life work environment. The students were grateful to the college for organizing this visit.
